

**August 25, 2015**

**Goddard Space Flight Center**

**Heliophysics Science Division**

**Peer Award**

Presented to

**Nathan Case (673)**

Nathan is a young PhD who has undertaken an unusual postdoc project and, through his innovation, has effectively opened up the analysis of citizen science aurora data for the space science community. He has submitted three first author papers in the past year (including a published GRL) and is working on a fourth. He has also been a co-author on numerous papers and presentations. He has worked with programmers, technical writers, educators, and human-computer interactions researchers, and is universally appreciated among a very diverse team. For these reasons, Nathan Case is presented with this 2015 Heliophysics Peer Award.
