<sup>2</sup>Department of Statistics, Lancaster University, UK

Feedback / Discussion:

What do we mean by comprehension of health information? (In terms of breadth and depth)

# Metacomprehension of Health Information

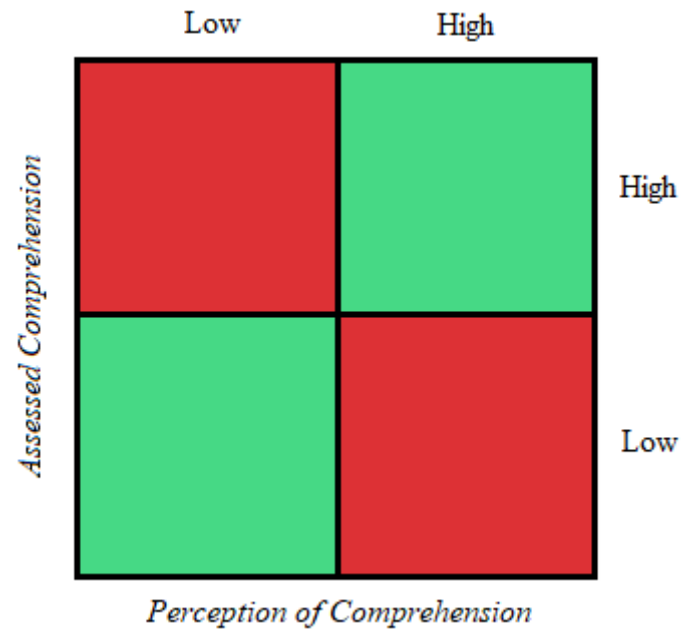

---

Q. “How well do you understand this information?”

# Accuracy of Metacomprehension Judgements

A simplification:

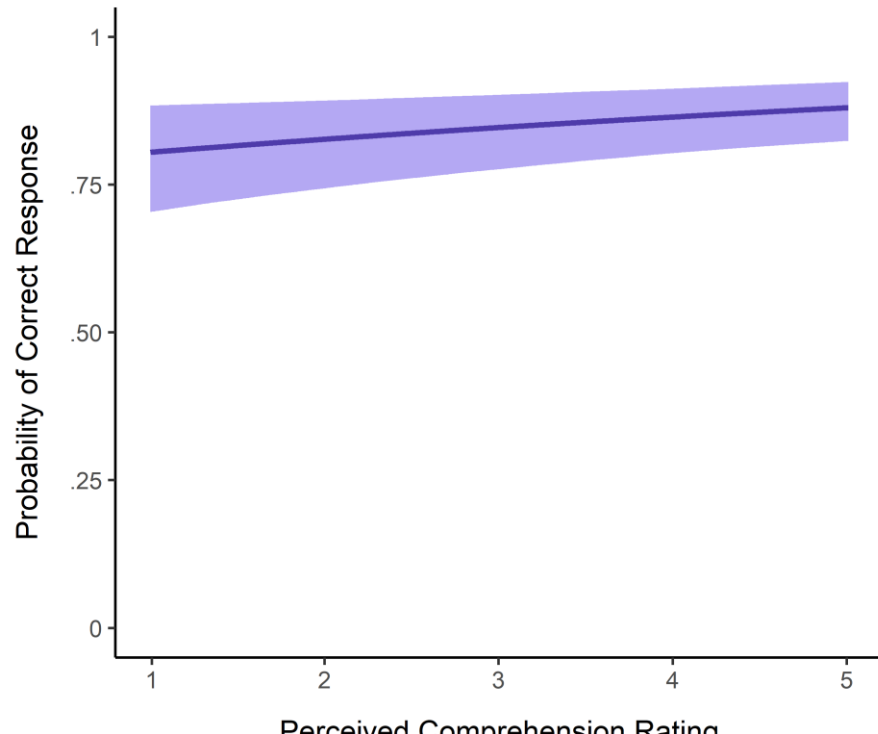

# Study 1

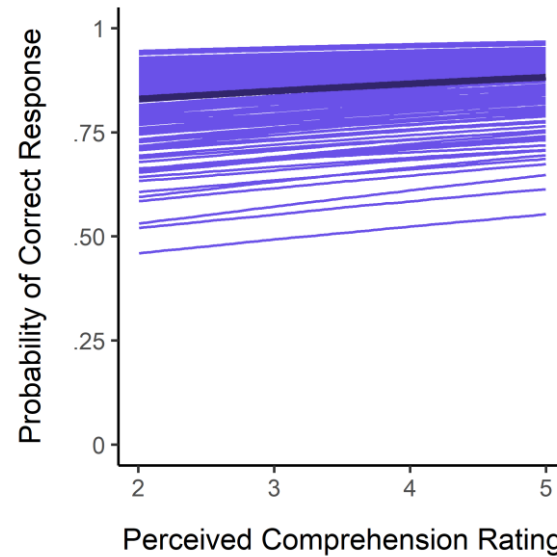

Design:  $N=175$ , 10 texts, 1-5 Rating, 4 MCQs per text

Model:  $\log\left(\frac{P_{ijk}}{1-P_{ijk}}\right) = \beta_0 + (\beta_1 + u_{1i})X_{ij} + u_{0i} + u_{0j} + u_{0k} + \varepsilon_{ijk}$

Results: Population effect:

Individual variability:

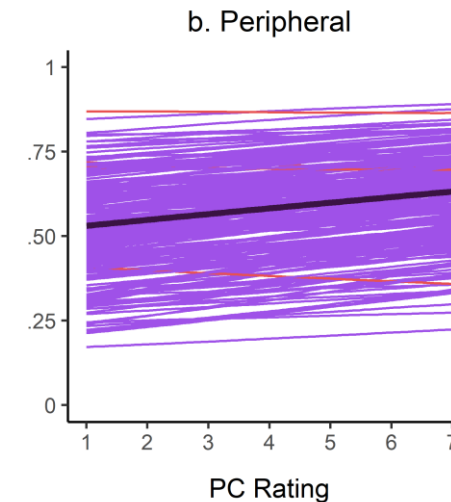

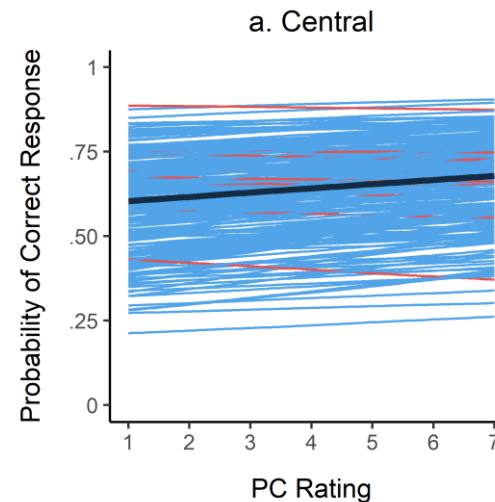

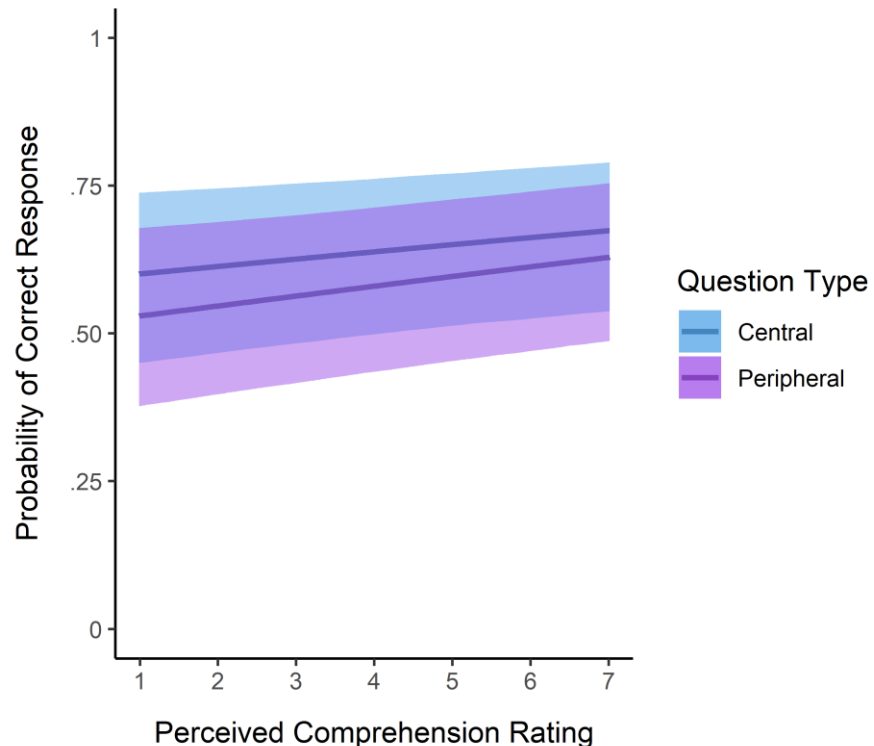

# Study 2

Design: N=225, 13 texts, 1-7 rating, 6 MCQ per text (1/2 per type)

$$\text{Model: } \log\left(\frac{P_{ijk}}{1-P_{ijk}}\right) = \beta_0 + (\beta_1 + u_{1i})X_{1ij} + (\beta_2 + u_{2i})X_{2k} + (\beta_3 + u_{3i})X_{1ij}X_{2k} + u_{0i} + u_{0j} + u_{0k}$$

Results: Population effect:

Individual variability:

# Interim Conclusions

---

- Weak positive association on health-related texts
- Judgements are informative of central and peripheral details
- Limited individual variability

Thank you for listening.
